Batteries

Robotics

Vision

Avvenire Technologies is building an integrated ecosystem around four pillars run by Infinitra AI:

- Artificial Intelligence (AiMind)
- Robotics (NeuroBots)
- Vehicles (Avvenire Electric Vehicles)
- Battery (collected, optimized, monetized through AI)

Defining the future of transportation, automation, and intelligence.

AI • EVs • Batteries • Robotics • Web3 Data

Step 1 — Foundation

Avvenire Technologies was formed through the strategic distribution agreement of Avvenire Electric Vehicles' assets. IP, prototypes, and brand equity secured.

Proven technology from day one.

Infinitra OS is the mind of the entire Avvenire ecosystem.

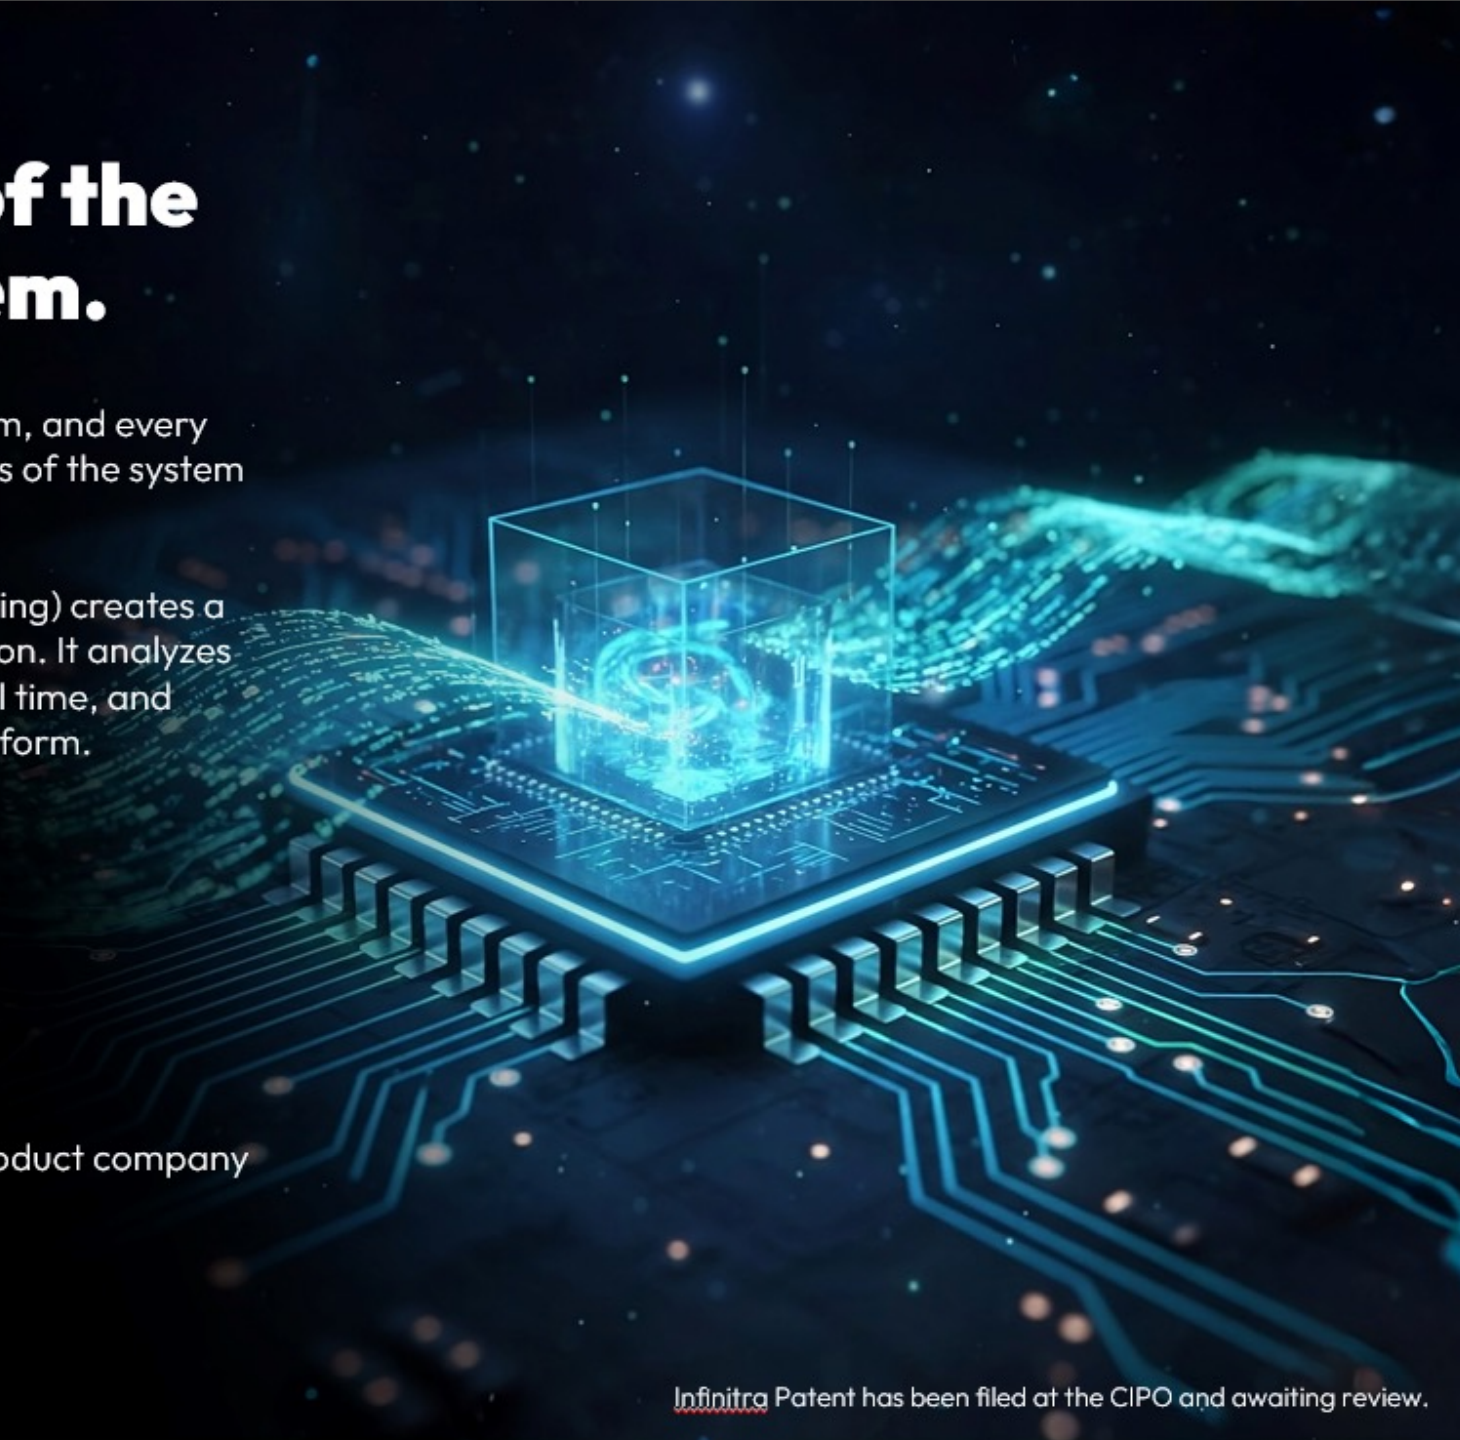

It connects every robot, every vehicle, every battery system, and every cloud service into one intelligent network, allowing all parts of the system to learn, adapt, and operate together.

Instead of isolated technologies, Infinitra OS (Patent Pending) creates a **unified ecosystem** that grows smarter with every interaction. It analyzes data from all Avvenire pillars, coordinates decisions in real time, and continuously improves performance across the entire platform.

Infinitra OS powers the future of:

- Intelligent robotics
- Connected mobility
- Advanced energy systems
- Cloud-driven automation

This is the foundation that transforms Avvenire from a product company into an integrated technology ecosystem.

Step 2 — Early Investor Opportunity

Ground-floor entry:

First raise offers investors maximum upside.

De-risked model:

Acquisition of Avvenire EV assets = immediate IP, prototypes, and brand equity.

Skip the risky zero-to-one stage:

We already hold tangible technology and infrastructure.

Capital goes to scaling, not R&D:

Investors fund market expansion, not just concept development.

Instant credibility:

Assets position Avvenire as a serious contender in the EV + tech space.

Step 3 — Expansion with Subsidiaries

A. Acquire a battery company to integrate the batteries in all our products

VERDACELL

B. Acquire NeuroBots. Adding products essential for the future. Humanoid and security dogs.

NEUROBOTS

C. Acquire AI Mind adding the AI capabilities for our electric vehicles, battery systems

 A.I. Mind

Putting the 4 pillars together and collecting data from electric vehicles, BMS, robots. Data that can be monetized

Step 4 — Vision & Ecosystem

Avvenire Technologies has an exclusive distribution agreement from **Avvenire Electric Vehicles**. This strategic move secured valuable **intellectual property (IP)**, **prototypes**, and **brand equity**, laying a strong foundation for the company's future expansion.

Step 5 — Growth Round

- **Trigger Point:** First raise with maximum upside
- **Higher Valuation:** Reflecting de-risking, proven tech, and market traction.
- **Investor Upside:** Enter just before the most transformative growth phase.
- **Exit Pathways:** Positioned for IPO on CSE as a base to go on after to a major exchange or strategic acquisition.

Participation in this round means securing a stake just before Avvenire transitions from startup to public market contender.

Go Public Pathway

GOAL: Establish Avvenire as a premier AI company, recognized for its integrated portfolio in AI, Robotics, Autonomous Transport, and Data Intelligence.

Our roadmap to a public listing is built on four growth levers:

- **Recurring Revenue** → Strengthening financials with predictable cash flow
- **Global Scale** → Expansion across EVs, Batteries, Robotics, and AI
- **Strategic Partnerships** → Accelerating adoption and market credibility
- **Governance & Trust** → Transparency that builds investor confidence

Competitive Advantage

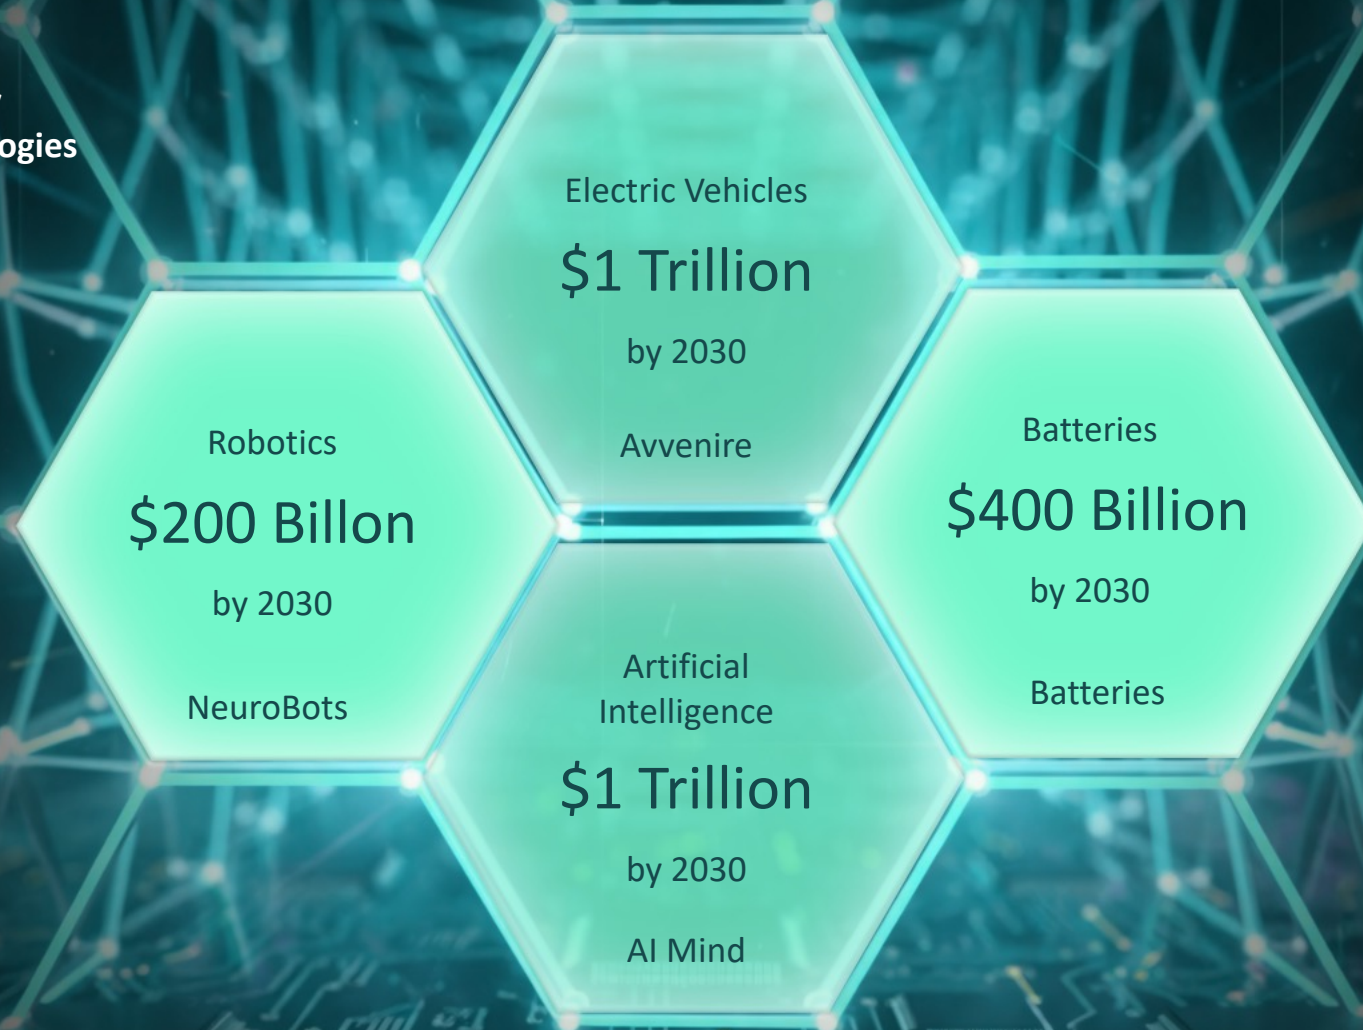

Imagine **Tesla**, **CATL**, **Boston Dynamics**, and **OpenAI** integrated into a single entity.

That's Avvenire.

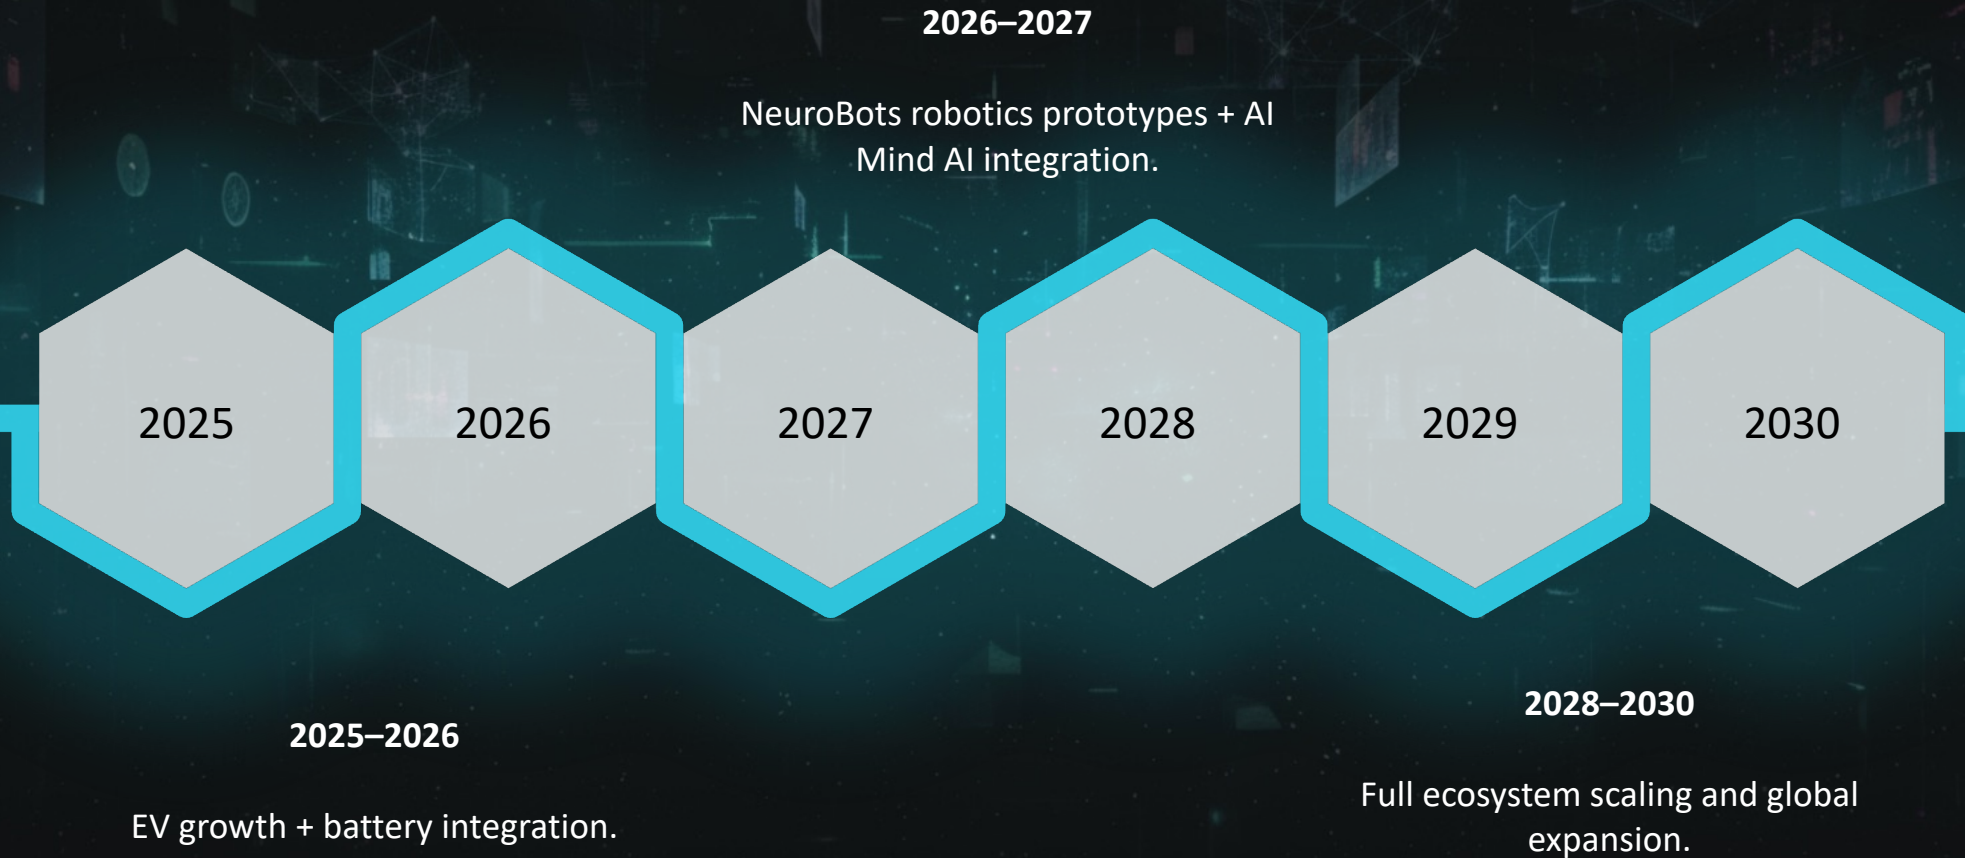

By uniting **AI**, **Robotics**, **Vehicles**, and **Data**, we are uniquely structured to lead the four defining megatrends of the 21st century.

Market Size

Data monetization fuels every division and Avvenire Technologies stands at the center of it all.

Roadmap

Avvenire Technologies — Investor Ask

The Ask:

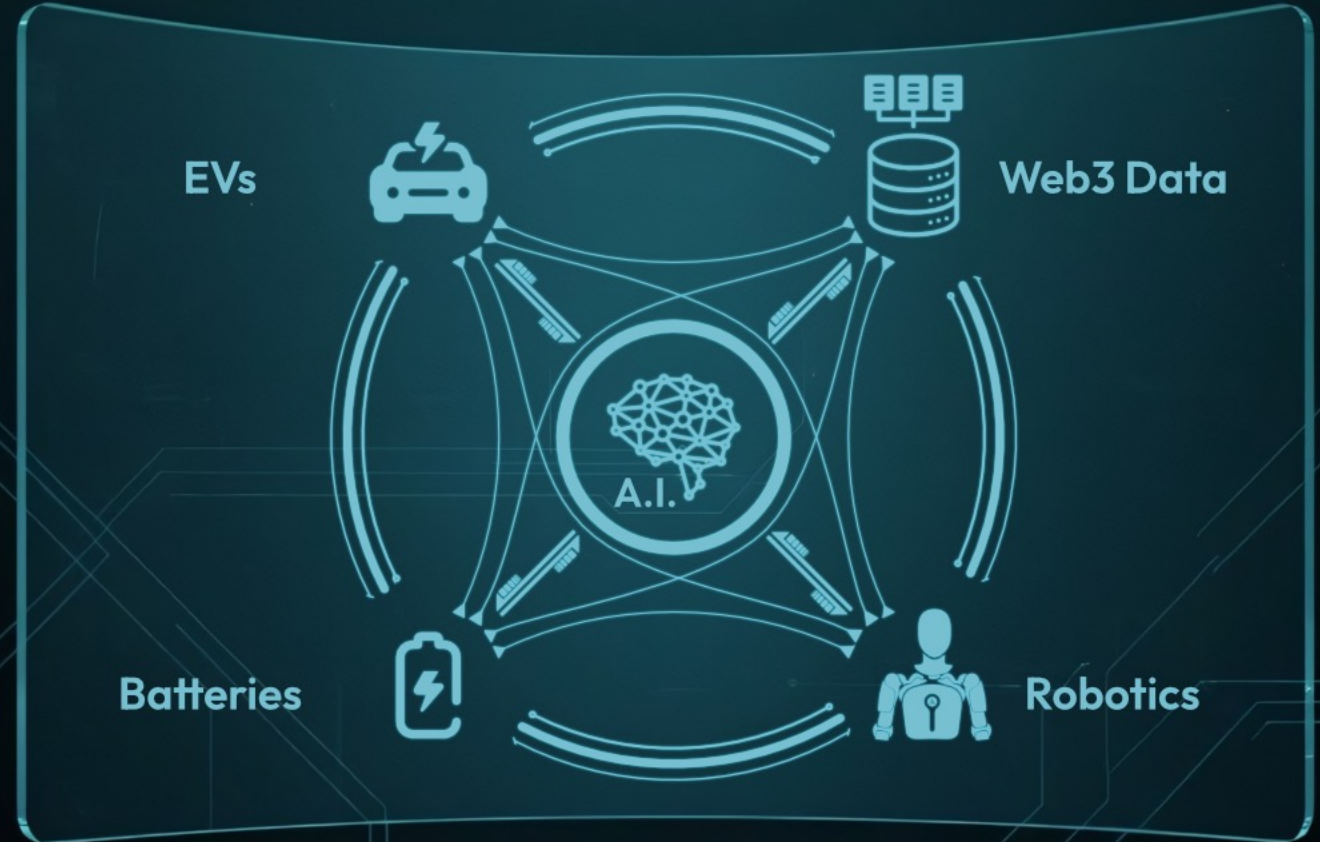

- Up to \$5M raise @ \$1 per share
- Total shares outstanding 105 million
- 7% additional warrants

Why Now:

- Entry at an early inflection point
- De-risked by EV IP & prototypes
- Positioned at the convergence of EVs, Batteries, Robotics & AI

Exit Potential:

- Phase I: CSE listing via IPO

Secure your stake today before the next growth stage.
